

INSTRUCTION MANUAL

REPTILE 1155

FREEDOM BREEDER

REPTILE 1155

Product Description

This rack is made of 304 Stainless Steel, no rust ever!

Over the years we have had many requests to make a small tub that is deeper to keep small lizards or snakes in. We listened and made the new Reptile 1155 rack, with 5" deep trays. These are perfect for individual small geckos, small snake species or baby boas and pythons.

Caution

Channels and backstops have sharp edges, take precautions.

Assembly

STEP 1. Unwrapping

The Reptile 1155 is packed in a cardboard carton and plastic wrap for protection during shipment. Carefully unpack the items and remove the pallet.

Notice that the Reptile 1155 is almost assembled.

Note: If you detect any issue or damage please contact us before you accept the shipment.

STEP 2. Parts

Count all parts to make sure nothing is missing.

See Packing list for Descriptions and Quantities.

PART #	DESCRIPTION	QTY
1	Reptile 1155 Stainless Steel Levels	11
2	5" Heat Panels	11
3	FB10-S Tubs	55
4	Base Frame	1
5	4" Heavy Duty Casters (Screws and Bolts Included)	4

Continue to step 3

Assembly

STEP 3. Casters

Notice that the rack may or may not had the casters installed.

In case they have been installed, you just need to turn upside down the frame with the casters to the correct position.

In case the casters are not installed:

- 1.- Find the casters, nuts, and bolts.
- 2.- Insert the bolts into the holes in the lower frame.
- 3.- Using the ratchet and the 1/2" socket, tighten the caster with the bolts on each corner of the frame until the bolts are flush to the tubing of the frame.

Note: Make sure to put all the nuts and bolts included (3 per caster) and not overtighten the nuts.

STEP 4. Stacking the levels

Stacked the levels over the base frame with the casters installed. You don't have to use tools on this step.

Assembly

STEP 5. Trays

Insert the trays thru the channels on each level.

STEP 6. Heating system

***Insulated**

For the Heating system, place the heating panels over the velcro on each level, and connect the panel system to a source power.

Once all the heating panels are placed and plugged into the power strip, you will then plug your power strip into your thermostat or your FB-120 x2 and then plug it into the wall outlet.

FREEDOM BREEDER

Assembly

If you purchased a power strip from us, you can either simply zip-tie each end to the side of the rack frame, or zip-screw each end to the rack frame.

ATTENTION CUSTOMERS:

Please inform the appropriate personnel to always INSPECT YOUR SHIPMENT for damage PRIOR to signing the delivery receipt. If there is obvious damage, do not accept the shipment without NOTING IN DETAIL and taking pictures of the damage on ALL copies of the carrier's delivery receipt. Please have the freight driver SIGN ALL COPIES to acknowledge your damage notation.

-Thank You!
